## **DETAILED ACTION**

### **Restrictions**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21 & 57-58, drawn to a system for measuring luminal cross-sectional area of the blood vessels, heart valves, and other hollow visceral organs, classified in class 600, subclass 547.
- II. Claims 22-41, drawn to a method for measuring a cross-sectional area of the targeted treatment site, classified in class 600, subclass 587.
- III. Claims 42-45, drawn to a method for constructing a three-dimensional model of a treatment site, classified in class 600, subclass 416.
- IV. Claims 46-49, drawn to a different method for constructing a three-dimensional model of a treatment site, classified in class 600, subclass 416.

The inventions are distinct because of the following reason:

Inventions I and II-IV are related as apparatus and process for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus used to measure cross-sections of a target treatment site can be used by another and materially different apparatus, such as constructing a three-dimensional model of a treatment site, as demonstrated by the Applicant.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper. Thus, Applicant is required to elected *one* of the aforementioned groups.

If Applicant elects Group I:

This application also contains claims directed to the following patentably distinct species: Species I, drawn to claims 1 & 3-12; Species II, drawn to claim 2; Species III, drawn to claims 13-21 & 57-58. The species are independent or distinct because each are related to alternative embodiments of impedance catheters.

If the Applicant elects the apparatus claims (Group I) in the above invention restriction, then Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after

the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

A telephone call was made to John Paik on September 12, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
